# THREAT-INFORMED DEFENSE
## at Enterprise Scale

It's easy for enterprise cybersecurity teams to get overwhelmed with the sheer number of threats faced by their organizations. Researching a single threat to determine if it's relevant to your enterprise and if you're currently defended against it takes multiple team members hours each week. Keeping up with the constant evolution of threat behaviors and defensive capabilities simply isn't possible by a human. That's where Tidal comes in.

Tidal makes it possible to achieve threat-informed defense at enterprise scale, so your teams can go from threats to actionable insights quickly. By providing continuous monitoring of your threat profiles and defensive context, enterprise teams always have a clear and prioritized picture of necessary defensive actions.

**Threat Profiles**
- ATT&CK® Data
- Tidal Enrichment
- Custom Threat Objects
- Coverage Map

**Defensive Stack**
- Tidal Product Registry™
- Private Registry
  - Breach & Attack Simulation Data
  - Custom Detections/Integrations
- 76 Tidal Confidence Score™

**Notifications & Continual Recommendations for Improvement**
- Capabilities
- Update Suggestions

**1** We start with the behaviors adversaries use to attack you. Threat profiles hone in on the behaviors used by the adversaries most likely to target your organization.

**2** We look at the defenses you have in place to see how well they defend against the threats in your threat profile.

**3** We generate a coverage map to show you gaps in your defenses, and the Tidal Confidence Score™ quantifies your defense posture.

**4** Threats and defenses evolve continuously. Tidal monitors your threat profile and defensive context, and provides daily alerts and recommendations for defensive action.
